About Me

An AI enthusiast with hands-on experience in NLP, RAG systems, and computer vision. Looking for opportunities to apply deep learning and data analysis to real-world applications.

Education

Thang Long University: Bachelor's Degree in Artificial Intelligence

2021 – 2025

Relevant Coursework:

- AI subjects: Introduction to AI, Machine Learning, Deep Learning, Computer Vision, NLP.
- Data subjects: Probability and Statistics, Introduction to Data Science, Data mining, Big data.

Technologies

Languages: C++, SQL, Python.

Data collection: Selenium.

Analysis techniques : Data processing, Descriptive analytics, Regression analytics, Classification analytics, Clustering analytics.

Visualization: Power BI, Matplotlib, Seaborn.

Machine learning/Deep learning: Scikit-learn, TensorFlow, Pytorch, LangChain.

Frontend: html.

Backend: Fast API.

English: Good at reading and communication

Experience

AI Dev - BKSoft

11/2025 - 3/2026

- Position: Fulltime

AI Dev - Dukick Studio

4/2026 - current

- Position: Fulltime

Projects

Data Analysis Agent

[Link to ↗](#)

- Built a tool-augmented conversational AI using Flask and Groq API, with an LLM-based intent classifier (llama-3.3-70b-versatile) across 6 intent categories.
- Routed queries to tools: `csv_analysis` for tabular stats and charts, `image_analysis` for multimodal Q&A, and `code_executor` for on-the-fly Python execution.

Visual Agent.

[Link to ↗](#)

- Architected a hierarchical multi-agent vision system with LangGraph Supervisor, dynamically routing tasks between research and vision agents orchestrated via Ollama.
- Built a multimodal pipeline combining a 31B vision-language model and YOLOv11x

for real-time detection, served through a streaming FastAPI backend (SSE) and React frontend.

Agentic RAG

Link to [🔗](#)

- Built an agentic RAG system for document QA with a multimodal ingestion pipeline (PDF, DOCX, Markdown, images) into a Neo4j knowledge graph.
- Implemented retrieval with vector search and NEXT_CHUNK graph expansion, exposed via a FastAPI web interface for upload, ingestion monitoring, and chat over indexed documents.

Stock market volatility prediction

Link to [🔗](#)

- Describe: Analyze market price fluctuations and build LSTM time series models to predict investment potential with low MSE error.

Certificate

VMS Math Olympiad Encouragement Prize [🔗](#)
TOEIC 630

2022

2025
